Introduction

Purpose and Background

The final rule of the Balanced Budget Act (BBA) of 1997 requires that State agencies contract with an External Quality Review Organization (EQRO) to conduct an annual external quality review (EQR) of the services provided by contracted CHIP Managed Care Organizations (MCOs). This EQR must include an analysis and evaluation of aggregated information on quality, timeliness and access to the health care services that a MCO furnishes to CHIP Managed Care enrollees.

The EQR-related activities that must be included in detailed technical reports are as follows:

- review to determine MCO compliance with structure and operations standards established by the State (42 CFR §438.358)
- validation of performance improvement projects
- validation of MCO performance measures.

The Pennsylvania (PA) Department of Human Services (DHS) Children's Health Insurance Program (CHIP) provides free or low-cost health insurance to uninsured children and teens that are not eligible for or enrolled in Medicaid Medical Assistance (MA). PA CHIP has contracted with IPRO as its EQRO vendor to conduct the 2018 EQRs for the CHIP MCOs and to prepare the technical reports. This is the first year of PA CHIP technical reports. The report includes five core sections:

- I. Structure and Operations Standards
- II. Performance Improvement Projects
- III. Performance Measures and Consumer Assessment of Healthcare Providers and Systems (CAHPS[®]) Survey
- IV. 2018 Strengths and Opportunities for Improvement
- V. Summary of Activities

For the CHIP MCOs, the information for the compliance with Structure and Operations Standards section of the report is derived from the results of on site reviews conducted by PA CHIP staff, with findings entered into the department's on site monitoring tool, and follow up materials provided as needed or requested. Standards presented in the on site tool are those currently reviewed and utilized by PA CHIP staff to conduct reviews; these standards may be applicable to other subparts, and will be crosswalked to reflect regulations as applicable.

Information for Section II of this report is derived from activities conducted with and on behalf of DHS CHIP to research, select, and define Performance Improvement Projects (PIPs) for a new validation cycle. Information for Section III of this report is derived from IPRO's validation of each CHIP MCO's performance measure submissions. Performance measure validation as conducted by IPRO includes both Pennsylvania specific performance measures as well as Healthcare Effectiveness Data and Information Set (HEDIS^{®1}) measures for each CHIP MCO. Within Section III, CAHPS[®] Survey results follow the performance measures.

Section IV has a summary of the MCO's strengths and opportunities for improvement for this review period as determined by IPRO. This section will highlight performance measures across HEDIS[®] and PA-specific performance measures where the MCO has performed highest and lowest. Section V provides a summary of EQR activities for the CHIP MCO for this review period.

¹ HEDIS[®] is a registered trademark of the National Committee for Quality Assurance.
2018 CHIP External Quality Review Report: First Priority Health - NEPA

I: Structure and Operations Standards

This section of the EQR report presents a review of the CHIP MCO's compliance with structure and operations standards. The review is based on information derived from the most recent reviews of the MCO. On site reviews are conducted by CHIP every three years.

The format for this section of the report was developed to be consistent with the subparts prescribed by the Balanced Budget Act regulations. This document groups the regulatory requirements under subject headings that are consistent with the three subparts set out in the BBA regulations and described in the *MCO Monitoring Protocol*. Under each subpart heading are the individual regulatory categories appropriate to those headings. IPRO's findings are presented in a manner consistent with the three BBA regulations subparts as explained in the Protocol, i.e., Subpart C: Enrollee Rights and Protections; Subpart D: Quality Assessment And Performance Improvement (including access, structure and operation and measurement and improvement standards); and Subpart H: Certifications and Program Integrity. As PA CHIP continues to move forward with alignment of the EQR provisions to the CHIP population, re-assessment of the review items and crosswalks may be warranted.

Methodology and Format

Prior to the onsite monitoring visit performed at the MCO, documents are provided to CHIP by the MCO, which addresses various areas of compliance. This includes training materials, provider manuals, MCO organization charts, policies and procedures manuals, and geo access maps. These documents are reviewed prior to the onsite monitoring visit and are used to address areas of compliance which include Quality of Care of Medical Services, Provider Adequacy, Applications and Eligibility, Customer Service, Marketing Outreach, Audits, and IT Reports. These items are used to assess the MCO's overall operational, fiscal, and programmatic activities to ensure compliance with contractual obligations. Federal and state law require that CHIP conduct monitoring and oversight of its MCOs.

Throughout the visit, these areas of compliance are discussed with the MCO and clarifying information is provided, where possible. Discussions that occur are compiled along with the reviewed documentation to provide a final determination of compliance, partial compliance, or non-compliance for each section. Table 1.1 showcases each of the items and subcategories.

IPRO reviewed the most recent elements in the areas that CHIP monitors and created a crosswalk to pertinent BBA regulations. A total of 28 unique items were identified that were relevant to evaluation of CHIP MCOs' compliance with the BBA regulations. These items vary in review periodicity from annually, semi-annually, quarterly, monthly and as needed. The items from Review Year (RY) 2017, 2016, and 2015, as applicable, provide the information necessary for this assessment.

Table 1.1: Compliance Items and Subcategories

Subpart C: Enrollee Rights and Protections
Medical Services
Covered Services
EPSDT/Bright Futures
Case Management / Special Needs Unit
Quality Improvement Plans
Provider Network
Network Adequacy
MCO Certification and Provider Credentialing
Enrollment Validation
Communication
Application and Renewal
Transfers In / Out of Their Enrollment
Renewal Rates
Application Timelines

Subpart D: Quality Assessment and Performance Improvement Regulations
Customer Service
CHIP Dedicated Customer Service Staff
CHIP Information
MCO's General Website
Member Issues – Blue / Green Sheets
Marketing and Outreach
Community Outreach
Programmatic Change Requests
Subpart H: Certifications and Program Integrity
Audits and Reports
ERP Logs and Resolution
Fraud and Abuse
HIPAA Breaches
PERM
PPS Reporting
A-133
Provider Integrity Report (Potentially Precluded Providers)
HEDIS®/ CAHPS®
Information Technology Files and Reports
Ad Hoc data and reporting
TMSIS
Provider Files

Determination of Compliance

Information necessary for the review is provided through an on-site review that is conducted by CHIP, Quality Assurance Division. Throughout the duration of this on-site, each area highlighted above is reviewed and a rating scale is utilized to determine compliance. The CHIP MCO can be rated either “non-compliant”, “partially compliant”, or “compliant” in each area based on the findings of the audit. Following each rating scale, a comprehensive description of identified strengths and weaknesses are provided to the CHIP MCO. If all items were Compliant, the CHIP MCO was evaluated as Compliant. If some were Compliant and some were non-Compliant, the CHIP MCO was evaluated as partially-Compliant. If all items were non-Compliant, the CHIP MCO was evaluated as non-Compliant. If no items were evaluated for a given category and no other source of information was available to determine compliance, a value of Not Determined was assigned for that category.

Subpart C: Enrollee Rights and Protections

28 items were evaluated for the CHIP MCO in Review Year (RY) 2017.

The general purpose of the Subpart C regulations is to ensure that each CHIP MCO has written policies regarding enrollee rights and complies with applicable Federal and State laws that pertain to enrollee rights and that the CHIP MCO ensures that the MCO's staff and affiliated providers take into account those rights when furnishing services to enrollees. [42 C.F.R. § 438.100 (a), (b)]

Table 1.2: MCO Compliance with Subpart C: Enrollee Rights and Protections Regulations

Subpart C: Categories	Compliance	Comments
Covered Services	Partially Compliant	The Highmark Office Manual was reviewed at the on-site and found to have inpatient hospital services limited at 90 days per calendar year. CHIP staff noted that these limits were required to be removed under minimum essential coverage provisions that went into effect in 2015. Highmark will make the necessary updates to their manual to reflect this.
EPSDT/Bright Futures	Compliant	
Case Management / Special Needs Unit	Compliant	
Quality Improvement Plans	Compliant	
Network Adequacy	Compliant	
MCO Certification and Provider Credentialing	Compliant	
Enrollment Validation	Partially Compliant	Highmark has reported 75% of their providers have enrolled with DHS at each service location. Highmark is utilizing targeted outreach to specific providers who have not yet enrolled with the Department.
Communication	Compliant	
Transfers In / Out of Their Enrollment	Compliant	
Renewal Rates	Compliant	
Application Timelines	Compliant	

Subpart D: Quality Assessment and Performance Improvement Regulations

The general purpose of the regulations included under this heading is to ensure that all services covered under the DHS’s CHIP program are available and accessible to CHIP enrollees. [42 C.F.R. § 438.206 (a)]

Table 1.3: MCO Compliance with Subpart D: Quality Assessment and Performance Improvement Regulations

Subpart D: Categories	Compliance	Comments
CHIP Dedicated Customer Service Staff	Compliant	
CHIP Information	Compliant	

Subpart D: Categories	Compliance	Comments
MCO's General Website	Partially Compliant	The Highmark website was accessed prior to the on-site and was not found to be user friendly. Links were not provided where they would be found useful to a user. Highmark agreed to review their website and make edits for a more user-friendly experience.
Member Issues – Blue / Green Sheets	Compliant	
Community Outreach	Compliant	
Programmatic Change Requests	Compliant	

Subpart H: Certifications and Program Integrity

The general purpose of the Subpart H regulations is to ensure the promotion of program integrity through programs which prevent fraud and abuse through means of misspent program funds and to promote quality health care services for CHIP enrollees. These safeguards require that the CHIP MCO make a commitment to a formal and effective fraud and abuse program. [42 C.F.R. § 438.600 (a)]

Table 1.4: MCO Compliance with Subpart H: Certifications and Program Integrity

Subpart H: Categories	Compliance	Comments
ERP Logs and Resolution	Compliant	
Fraud and Abuse	Compliant	
HIPAA Breaches	Compliant	
PERM	Compliant	
PPS Reporting	Compliant	
A-133	Compliant	
Provider Integrity Report (Potentially Precluded Providers)	Compliant	
HEDIS®/ CAHPS®	Compliant	
Ad Hoc data and reporting	Compliant	
TMSIS	Compliant	

Subpart H: Categories	Compliance	Comments
Provider Files	Partially Compliant	Inconsistencies were found prior to the on-site in the Provider Files. Test calls were made to the CHIP call center using Highmark's provider files with a 47% accuracy rate. Highmark is currently undergoing a campaign to improve the provider files.
Testing	Compliant	

II. Performance Improvement Projects

In accordance with current BBA regulations, IPRO undertook validation of Performance Improvement Projects (PIPs) for each CHIP MCO. For the purposes of the EQR, CHIP MCOs were required to participate in studies selected by DHS CHIP for validation by IPRO in 2017 for 2018 activities. Under the applicable Agreement with the DHS in effect during this review period, CHIP MCOs are required to conduct focused studies each year. For all CHIP MCOs, two new PIPs were initiated as part of this requirement. For all PIPs, CHIP MCOs are required to implement improvement actions and to conduct follow-up in order to demonstrate initial and sustained improvement or the need for further action.

As part of the new EQR PIP cycle that was initiated for all CHIP MCOs in 2017, IPRO has adopted the LEAN methodology, following the Centers for Medicare & Medicaid Services (CMS) recommendation that Quality Improvement Organizations (QIOs) and other healthcare stakeholders embrace LEAN in order to promote continuous quality improvement in healthcare.

CHIP MCOs were required to implement two internal PIPs in priority topic areas chosen by DHS. For this PIP cycle, two topics were selected: “Improving Developmental Screening Rate in Children Ages 1, 2, and 3 Years” and “Improving Blood Lead Screening Rate in Children 2 Years of Age”.

“Improving Developmental Screening Rate in Children Ages 1, 2, and 3 Years” was selected after review of the HEDIS® Developmental Screening in the First Three Years measure, as well as a number of additional developmental measures. The performance of these measures across Pennsylvania CHIP MCOs has been flat, and in some cases has not improved across years. Available data indicate that fewer than half of Pennsylvania children from birth to age 3 enrolled in CHIP and Medicaid in 2014 were receiving recommended screenings. Considering that approximately 1 in 10 Pennsylvania children may experience a delay in one or more aspects of development, this topic was selected with the aim of all children at risk are reached. The Aim Statement for the topic is “By the end of 2020 the CHIP MCO aims to increase developmental screening rates for children ages one, two and three years old.” CHIP MCOs are asked to create objectives that support this Aim Statement.

For this PIP, DHS CHIP is requiring all CHIP MCOs to submit rates at the baseline, interim, and final measurement years for “Developmental Screening in the First Three Years of Life”. Additionally, CHIP MCOs are encouraged to consider other performance measures such as:

- Proportion of children identified at-risk for developmental, behavioral, and social delays who were referred to early intervention.
- Percentage of children and adolescents with access to primary care practitioners.
- Percentage of children with well-child visits in the first 15 months of life.

“Improving Blood Lead Screening Rates in Children 2 Years of Age” was selected as the result of several observations. Despite an overall decrease over the last 30 years in children with elevated blood lead levels in the United States, children from low-income families in specific states, including Pennsylvania, have seen decreased rates of screening of blood lead levels. Current CHIP policy requires that all children ages one and two years old and all children ages three through six without a prior lead blood test have blood levels screened consistent with current Department of Health and CDC standards. The average national lead screening rate in 2016 is 66.5%, while the Pennsylvania CHIP average is 53.2%. Despite an overall improvement in lead screening rates for Pennsylvania CHIP MCOs over the past few years, rates by CHIP MCO and weighted average fall below the national average. In addition to the lead screening rate, CHIP MCOs are encouraged to consider these measures as optional initiatives:

- Percentage of home investigations where lead exposure risk hazards/factors are identified,
- Total number of children successfully identified with elevated blood lead levels,
- Percent of the population under the age of five suffering from elevated blood lead levels, or
- Percent of individuals employed in the agriculture, forestry, mining, and construction industries.

The PIPs extend from January 2017 through December 2020; with research beginning in 2017, initial PIP proposals developed and submitted in second quarter 2017, and a final report due in June 2021. The non-intervention baseline 2018 CHIP External Quality Review Report: First Priority Health - NEPA

period is January 2017 to December 2017. Following the formal PIP proposal, the timeline defined for the PIPs includes required interim reports in June 2019 and June 2020, as well as a final report in June 2021.

2018 is the tenth year to include validation of PIPs. For each PIP, all CHIP MCOs share the same baseline period and timeline defined for that PIP. To introduce each PIP cycle, DHS CHIP provided specific guidelines that addressed the PIP submission schedule, the measurement period, documentation requirements, topic selection, study indicators, study design, baseline measurement, interventions, re-measurement, and sustained improvement. Direction was given with regard to expectations for PIP relevance, quality, completeness, resubmissions and timeliness.

All CHIP MCOs are required to submit their projects using a standardized PIP template form, which is consistent with the CMS protocol for *Conducting Performance Improvement Projects*. These protocols follow a longitudinal format and capture information relating to:

- Activity Selection and Methodology
- Data/Results
- Analysis Cycle
- Interventions

Validation Methodology

IPRO's review evaluates each project against seven review elements:

- Element 1. Project Topic/Rationale
- Element 2. Aim
- Element 3. Methodology
- Element 4. Barrier Analysis
- Element 5. Robust Interventions
- Element 6. Results Table
- Element 7. Discussion and Validity of Reported Improvement

The first six elements relate to the baseline and demonstrable improvement phases of the project. The last element relates to sustaining improvement from the baseline measurement.

Review Element Designation/Weighting

This section describes the scoring elements and methodology that will occur during the intervention and sustainability periods. Measurement Year (MY) 2017 is the baseline year, and during the 2018 review year, due to the several levels of feedback required, elements were reviewed and scored at multiple points during the year to provide guidance to the CHIP MCOs towards improving their proposals.

For each review element, the assessment of compliance is determined through the weighted responses to each review item. Each element carries a separate weight. Scoring for each element is based on full, partial and non-compliance. Points are awarded for the two phases of the project noted above and combined to arrive at an overall score. The overall score is expressed in terms of levels of compliance. The elements are not formally scored beyond the full/partial/non-compliant determination.

Table 2.1 presents the terminologies used in the scoring process, their respective definitions, and their weight percentage.

Table 2.1: Element Designation

Element Designation		
Element Designation	Definition	Weight
Full	Met or exceeded the element requirements	100%
Partial	Met essential requirements but is deficient in some areas	50%
Non-compliant	Has not met the essential requirements of the element	0%

Scoring Matrix

When the PIPs are reviewed, all projects are evaluated for the same elements. The scoring matrix is completed for those review elements where activities have during the review year. At the time of the review, a project can be reviewed for only a subset of elements. It will then be evaluated for other elements at a later date, according to the PIP submission schedule. At the time each element is reviewed, a finding is given of “Met”, “Partially Met”, or “Not Met”. Elements receiving a “Met” will receive 100% of the points assigned to the element, “Partially Met” elements will receive 50% of the assigned points, and “Not Met” elements will receive 0%.

Findings

To encourage focus on improving the quality of the projects, PIPs were assessed for compliance on all applicable elements, but were not formally scored. The multiple levels of activity and collaboration between DHS, the CHIP MCOs, and IPRO continued and progressed throughout the review year.

Proposal documents were submitted in March 2018. Review of these submissions began in April 2018. Baseline documents were submitted in May 2018, and review of these submissions began in May and continued through September 2018. Upon initial review of the submissions, CHIP MCOs were provided findings for each PIP with request for clarification/revision as necessary. CHIP MCOs requiring additional discussion and potential modification were contacted for individual CHIP MCO conference calls.

Improving Developmental Screening Rate in Children Ages 1, 2, and 3 Years

Highmark provided a discussion of topic rationale which included the potential for meaningful impact on member health, functional status, and satisfaction. The topic selection impacts the maximum proportion of members that is feasible, while still reflecting high-volume and high-risk conditions. The discussion also included support of the topic rationale with MCO-specific data and trends, which were utilized to compare to statewide and nationwide benchmarks in assessing reasonability of the topic of Developmental Screening.

The Aim statement developed by the plan specified a goal which was bold and feasible, and based upon baseline data and strength of interventions. Additionally, the Aim specifies three performance indicators (one for each product line) to monitor improvement, which correspond to developed goals. It was noted that the objectives align the aim and goals with the interventions developed, bringing consistency across the PIP.

Methodologically, Highmark developed performance indicators which measure changes in health status, functional status, and processes of care with strong associations with improved outcomes. These indicators focus across all three of Highmark’s product lines to include HMO, PPO, and HMO NEPA products. Each of these lines will be monitoring their progress throughout the PIP cycle. It was noted that only one indicator for each line was selected, and that an additional indicator should be included, per direction from CHIP. The study design for the proposal specifies data collections method that are valid and data analysis procedures which are reliable.

Highmark performed a barrier analysis which was informed by Lean Six Sigma Cause and Effect Analysis, including fishbone diagrams, and clinical workgroup data and discussions. Barriers were identified at both the member level and provider level. Interventions were developed which were informed by the barrier analysis and include education via telephonic and postcard engagement. It was noted that no barrier analysis and subsequent interventions were developed to address the MCO level.

A recommendation was included for Highmark to provide updated finalized rates for all performance indicators. Additionally, final goals and target rates were requested to be included in the results section to track progress towards goals over time.

Improving Blood Lead Screening Rate in Children 2 Years of Age

Highmark provided a discussion of topic rationale which included the potential for meaningful impact on member health, functional status, and satisfaction. The topic selection impacts the maximum proportion of members that is feasible, while still reflecting high-volume and high-risk conditions. The discussion also included support of the topic rationale with MCO-specific data and trends, which were utilized to compare to statewide and nationwide benchmarks in assessing reasonability of the topic of Lead Screening.

The Aim statement developed by the plan specified a goal which was bold and feasible, and based upon baseline data and strength of interventions. Additionally, the Aim specifies a performance indicator to monitor improvement, which corresponds to developed goals. It was noted that an additional indicator should be developed to track progress, as is the case with the Developmental Screening PIP. The objectives align the aim and goals with the intervention developed, bringing consistency across the PIP.

Highmark developed a performance indicator which measure changes in health status, functional status, and processes of care with strong associations with improved outcomes. Procedures were highlighted which indicate the data source, measure type, and reliability. The study design specifies a data collection methodology that are valid and data analysis procedures that are logical.

Barrier analysis was carried out utilizing Lean Six Sigma Cause and Effect Analysis, including fishbone diagrams, and clinical workgroup data and discussions. Although all interventions do seem informed by barrier analysis, it was noted that the MCO should consider expanding the interventions or adding more to address some of the provider level barriers that were outlined in the barrier analysis. The interventions solely focus on members, and no provider or MCO level interventions were identified.

Additionally, a recommendation was included for Highmark to provide updated finalized rates for all performance indicators. Additionally, final goals and target rates were requested to be included in the results section to track progress towards goals over time.

Table 2.2: First Priority Health (NEPA) PIP Compliance Assessments – Baseline Reports

Review Element	Improving Developmental Screening Rate in Children Ages 1, 2, and 3 Years	Improving Blood Lead Screening Rate in Children 2 Years of Age
1. Project Topic and Rationale	Met	Met
2. Aim Statement	Met	Partial
3. Methodology	Met	Met
4. Barrier Analysis	Met	Met
5. Robust Interventions	Partial	Partial
6. Results Table	Partial	Partial
7. Discussion	N/A	N/A

III. Performance Measures and CAHPS® Survey

Methodology

IPRO validated PA specific performance measures and HEDIS® data for each of the CHIP MCOs.

The CHIP MCOs were provided with final specifications for the PA Performance Measures from April to May 2018. Source code, raw data and rate sheets were submitted by the CHIP MCOs to IPRO for review in 2018. IPRO conducted an initial validation of each measure, including source code review and provided each MCO with formal written feedback. The CHIP MCOs were then given the opportunity for resubmission, if necessary. Source code was reviewed by IPRO. Raw data were also reviewed for reasonability and IPRO ran code against these data to validate that the final reported rates were accurate. Additionally, CHIP MCOs were provided with comparisons to the previous year’s rates and were requested to provide explanations for highlighted differences. Differences were highlighted for rates that were statistically significant and displayed at least a 3-percentage point difference in observed rates.

Evaluation of CHIP MCO’s performance is based on both PA-specific performance measures and selected HEDIS® measures for the EQR. The following is a list of the performance measures included in this year’s EQR report.

Table 3.1: Performance Measure Groupings

Source	Measures
Access/Availability to Care	
HEDIS®	Children and Adolescents’ Access to PCPs (Age 12 - 24 months)
HEDIS®	Children and Adolescents’ Access to PCPs (Age 25 months - 6 years)
HEDIS®	Children and Adolescents’ Access to PCPs (Age 7-11 years)
HEDIS®	Children and Adolescents’ Access to PCPs (Age 12-19 years)
PA EQR	Contraceptive Care for All Women Most/Moderately Effective (Age 15 months – 2 years)
PA EQR	Contraceptive Care for All Women LARC (Age 15 months – 2 years)
PA EQR	Contraceptive Care for Postpartum Women Most/Moderately Effective – 3 days (Age 15 months – 20 years)
PA EQR	Contraceptive Care for Postpartum Women Most/Moderately Effective – 60 days (Age 15 months – 20 years)
PA EQR	Contraceptive Care for Postpartum Women LARC – 3 days (Age 15 months – 20 years)
PA EQR	Contraceptive Care for Postpartum Women LARC – 60 days (Age 15 months – 20 years)
Well-Care Visits and Immunizations	
HEDIS®	Weight assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Body Mass Index percentile: (Age 3-11 years)
HEDIS®	Weight assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Body Mass Index percentile: (Age 12-17 years)
HEDIS®	Weight assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Body Mass Index percentile: (Total)
HEDIS®	Weight assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Nutrition: (Age 3-11 years)
HEDIS®	Weight assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Nutrition: (Age 12-17 years)
HEDIS®	Weight assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Nutrition: (Total)
HEDIS®	Weight assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Physical activity: (Age 3-11 years)
HEDIS®	Weight assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Physical activity: (Age 12-17 years)
HEDIS®	Weight assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Physical Activity: (Total)
HEDIS®	Childhood Immunization Status by Age 2 (DtaP)

PA-Specific Performance Measure Selection and Descriptions

Several PA-specific performance measures were calculated by each CHIP MCO and validated by IPRO. In accordance with DHS direction, IPRO created the indicator specifications to resemble HEDIS® specifications. Measures previously developed and added as mandated by CMS for children in accordance with the Children’s Health Insurance Program Reauthorization Act (CHIPRA) were continued as applicable to revised CMS specifications. Additionally, new measures were developed and added in 2018 as mandated in accordance with the ACA. For each indicator, the criteria that were specified to identify the eligible population were product line, age, enrollment, anchor date, and event/diagnosis. To identify the administrative numerator positives, date of service and diagnosis/procedure code criteria were outlined, as well as other specifications, as needed.

PA Specific Administrative Measures

Developmental Screening in the First Three Years of Life– CHIPRA Core Set

This performance measure assesses the percentage of children screened for risk of developmental, behavioral, and social delays using a standardized screening tool in the 12 months preceding their first, second, or third birthday. Four rates, one for each group and a combined rate, are to be calculated and reported for each numerator.

Dental Sealants for 6-9 Year Old Children at Elevated Caries Risk – CHIPRA Core Set

This performance measure assesses the percentage of enrolled children ages 6-9 years at elevated risk of dental caries who received a sealant on a permanent first molar tooth within the measurement year.

Additionally, to be more closely aligned to the CHIPRA Core Set Measure specifications, a second enhanced measure is reported which includes additional available dental data (Dental-enhanced).

Annual Number of Asthma Patients with One or More Asthma-Related Emergency Room Visits

This performance measure assesses the percentage of children and adolescents, two years of age through 19 years of age, with an asthma diagnosis who have ≥1 emergency department (ED) visit during the measurement year.

Contraceptive Care for All Women – CHIPRA Core Set – New for 2018

This performance measure assesses the percentage of women ages 15 through 20 at risk of unintended pregnancy and were provided a most effective/moderately effective contraception method or a long-acting reversible method of contraception (LARC). For the CMS Core measures, two rates are reported: one each for (1) the provision of most/moderately effective contraception and for (2) the provision of LARC.

Contraceptive Care for Postpartum Women – CHIPRA Core Set – New for 2018

This performance measure assesses the percentage of women ages 15 through 20 who had a live birth and were provided a most effective/moderately effective contraception method or a long-acting reversible method of contraception (LARC), within 3 days and within 60 days of delivery. For the CMS Core measures, four rates are reported in total (1) Most or moderately effective contraception – 3 days, (2) Most or moderately effective contraception – 60 days, (3) LARC – 3 days, and (4) LARC – 60 days.

HEDIS® Performance Measure Selection and Descriptions

Each CHIP MCO underwent a full HEDIS® compliance audit in 2018. As indicated previously, performance on selected HEDIS® measures is included in this year’s EQR report. Development of HEDIS® measures and the clinical rationale for their inclusion in the HEDIS® measurement set can be found in HEDIS® 2018, Volume 2 Narrative. The measurement year for HEDIS® 2018 measures is 2017, as well as prior years for selected measures. Each year, DHS updates its requirements for the CHIP MCOs to be consistent with NCQA’s requirement for the reporting year. CHIP MCOs are required to report the complete set of CHIP measures, as specified in the HEDIS® Technical Specifications, Volume 2. Depending on the measure, HEDIS® indicator rates are calculated through one of two methods: (1) administrative, which uses only the CHIP MCO’s data systems to identify numerator positives and (2) hybrid, which uses a combination of administrative data and medical record review (MRR) to identify numerator “hits” for rate calculation. In addition, DHS does not require the CHIP MCOs to produce the Chronic Conditions component of the CAHPS® 5.0 – Child Survey.

Children and Adolescents’ Access to Primary Care Practitioners

This measure assesses the percentage of members 12 months–19 years of age who had a visit with a PCP. The organization reports four separate percentages for each product line.

- Children 12–24 months and 25 months–6 years who had a visit with a PCP during the measurement year.
- Children 7–11 years and adolescents 12–19 years who had a visit with a PCP during the measurement year or the year prior to the measurement year.

Well-Child Visits in the First 15 Months of Life

This measure assessed the percentage of enrollees who turned 15 months old during the measurement year, who were continuously enrolled from 31 days of age through 15 months of age who received six or more well-child visits with a PCP during their first 15 months of life.

Well-Child Visits in the Third, Fourth, Fifth, and Sixth Years of Life

This measure assessed the percentage of enrollees who were 3, 4, 5, or 6 years of age during the measurement year, who were continuously enrolled during the measurement year and received one or more well-child visits with a PCP during the measurement year.

Childhood Immunization Status

This measure assessed the percentage of children who turned two years of age in the measurement year who were continuously enrolled for the 12 months preceding their second birthday and who received one or both of two

immunization combinations on or before their second birthday. Separate rates were calculated for each combination.

Combination 2 and 3 consists of the following immunizations:

(4) Diphtheria and Tetanus, and Pertussis Vaccine/Diphtheria and Tetanus (DTaP/DT)

(3) Injectable Polio Vaccine (IPV)

(1) Measles, Mumps, and Rubella (MMR)

(3) Haemophilus Influenza Type B (HiB)

(3) Hepatitis B (HepB)

(1) Chicken Pox (VZV)

(4) Pneumococcal Conjugate Vaccine – Combination 3 only

Adolescent Well-Care Visits

This measure assessed the percentage of enrolled members 12–19 years of age who had at least one comprehensive well-care visit with a PCP or an OB/GYN practitioner during the measurement year.

Weight assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents

The percentage of members 3–17 years of age who had an outpatient visit with a PCP or OB/GYN and who had evidence of the following during the measurement year.

- BMI percentile documentation.
- Counseling for nutrition.
- Counseling for physical activity

**Because BMI norms for youth vary with age and gender, this measure evaluates whether BMI percentile is assessed rather than an absolute BMI value.*

Immunization for Adolescents

This measure assessed the percentage of adolescents 13 years of age who had one dose of meningococcal conjugate vaccine and one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine by their 13th birthday. The measure calculates a rate for each vaccine and two combination rates.

- Combination 1: Meningococcal and Tdap
- Combination 2: Meningococcal, Tdap, and HPV

Lead Screening in Children

This measure assessed the percentage of children 2 years of age who had one or more capillary or venous lead blood tests for lead poisoning by their second birthday.

Follow-up Care for Children Prescribed ADHD Medication

This measure assessed the percentage of children newly prescribed attention-deficit/hyperactivity disorder (ADHD) medication who had at least three follow-up care visits within a 10-month period, one of which was within 30 days of when the first ADHD medication was dispensed. Two rates are reported.

- *Initiation Phase.* The percentage of members 6–12 years of age as of the IPSP with an ambulatory prescription dispensed for ADHD medication, who had one follow-up visit with practitioner with prescribing authority during the 30-day Initiation Phase.
- *Continuation and Maintenance (C&M) Phase.* The percentage of members 6–12 years of age as of the IPSP with an ambulatory prescription dispensed for ADHD medication, who remained on the medication for at least 210 days and who, in addition to the visit in the Initiation Phase, had at least two follow-up visits with a practitioner within 270 days (9 months) after the Initiation Phase ended.

Follow Up After Hospitalization for Mental Illness

The percentage of discharges for members 6 years of age and older who were hospitalized for treatment of selected mental illness diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are reported.

- The percentage of discharges for which the member received follow-up within 30 days after discharge.
- The percentage of discharges for which the member received follow-up within 7 days after discharge.

Use of First-Line Psychosocial Care for Children and Adolescents on Antipsychotics

The percentage of children and adolescents 1–17 years of age who had a new prescription for an antipsychotic medication and had documentation of psychosocial care as first-line treatment.

Annual Dental Visit

This measure assessed the percentage of children and adolescents between the ages of 2 and 20 years of age who were continuously enrolled in the MCO for the measurement year who had a dental visit during the measurement year.

Chlamydia Screening in Women

This measure assessed the percentage of women 16–19 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement year.

Appropriate Testing for Children with Pharyngitis

This measure assessed the percentage of children 3–18 years of age who were diagnosed with pharyngitis, dispensed an antibiotic and received a group A streptococcus (strep) test for the episode. A higher rate represents better performance (i.e., appropriate testing).

Appropriate Treatment for Children with Upper Respiratory Infection

This measure assessed the percentage of children 3 months–18 years of age who were given a diagnosis of upper respiratory infection (URI) and were not dispensed an antibiotic prescription.

Medication Management for People with Asthma - 75% Compliance

This measure assessed the percentage of members 5–19 years of age during the measurement year who were identified as having persistent asthma and were dispensed appropriate medications that they remained on during the treatment period and remained on an asthma controller medication for at least 75% of their treatment period.

Use of Multiple Concurrent Antipsychotics in Children and Adolescents

This measure assessed the percentage of children and adolescents 1–17 years of age who were on two or more concurrent antipsychotic medications.

For this measure a lower rate indicates better performance.

Metabolic Monitoring for Children and Adolescents on Antipsychotics

This measure assessed the percentage of children and adolescents 1–17 years of age who had two or more antipsychotic prescriptions and had metabolic testing.

Additional HEDIS® Measures

Ambulatory Care, Inpatient Utilization, Mental Health Utilization, and Identification of Alcohol and Other Drug Services measures, due to differences in reporting metrics compared to the above measures, are included in Tables A1 through A4 in Appendix A of this report.

CAHPS® Survey

The Consumer Assessment of Healthcare Providers and Systems (CAHPS®) program is overseen by the Agency of Healthcare Research and Quality (AHRQ) and includes many survey products designed to capture consumer and patient perspectives on health care quality. NCQA uses the adult and child versions of the CAHPS® Health Plan Surveys for HEDIS.

Implementation of PA-Specific Performance Measures and HEDIS® Audit

The CHIP MCO successfully implemented all of the PA-specific measures for 2018 that were reported with MCO-submitted data. The CHIP MCO submitted all required source code and data for review. IPRO reviewed the source code and validated raw data submitted by the CHIP MCO. All rates submitted by the CHIP MCO were reportable. Rate calculations were collected via rate sheets and reviewed for all of the PA-specific measures.

The Contraceptive Care for All Women and Contraceptive Care for Postpartum Women (CCW; CCP) were new in 2018 for all CHIP MCOs.

The Dental Sealants for 6-9 Year Old Children at Elevated Caries Risk (SEAL-CH) measure underwent some modifications for 2018. This measure was new in 2016 and several issues were discovered during the 2016 validation process. Feedback received from MCOs regarding the 2016 implementation was highlighted for discussion and led to modifications to the measure specifications for the 2017 validation process. One issue in particular was that many MCOs noted that there were providers other than the ones specified by CMS potentially applying the sealants. Based on the issues, a second numerator was developed in addition to the CMS numerator. Cases included in this numerator are cases that would not have been accepted per the CMS guidance because the provider type could not be crosswalked to an acceptable CMS provider. The second numerator was created to quantify these cases, and to provide additional information for DHS about whether sealants were being applied by providers other than those outlined by CMS, for potential future consideration when discussing the measure. There was a wide range of other providers identified across MCOs for the second numerator. Because the second numerator and the total created by adding both numerators deviate from CMS guidance, they were provided to DHS for informational purposes but are not included for reporting. The SEAL-CH and enhanced SEAL-CH rates reported in this section for are comparable to the 2016 rates and are aligned with the CMS guidance. In 2018, these changes were continued, and applicable CDT codes used for numerator compliance were updated and/or added.

The Developmental Screening in the First Three Years of Life measure was modified in 2018 in order to clarify the age cohorts that are used when reporting for this measure. This clarification noted that children can be screened in the 12 months preceding or on their 1st, 2nd, or 3rd birthday. Specifically, the member must be screened in the following timeframes in order to be compliant for their age cohort:

- Age Cohort 1: member must be screened anytime between birth to 1st birthday
- Age Cohort 2: member must be screened anytime between 1 day after 1st birthday to day of 2nd birthday
- Age Cohort 3: member must be screened anytime between 1 day after 2nd birthday to day of 3rd birthday

This application of compliance was a common issue across CHIP MCOs this year.

Findings

CHIP MCO results are presented in Tables 3.2 through 3.8. For each measure, the denominator, numerator, and measurement year rates with 95% upper and lower confidence intervals (95% CI) are presented. Confidence intervals are ranges of values that can be used to illustrate the variability associated with a given calculation. For any rate, a 95%

confidence interval indicates that there is a 95% probability that the calculated rate, if it were measured repeatedly, would fall within the range of values presented for that rate. All other things being equal, if any given rate were calculated 100 times, the calculated rate would fall within the confidence interval 95 times, or 95% of the time.

Rates for both the measurement year and the previous year are presented, as available [i.e., 2018 (MY 2017) and 2017 (MY 2016)]. In addition, statistical comparisons are made between the 2018 and 2017 rates. For these year-to-year comparisons, the significance of the difference between two independent proportions was determined by calculating the z-ratio. A z-ratio is a statistical measure that quantifies the difference between two percentages when they come from two separate populations. For comparison of 2018 rates to 2017 rates, statistically significant increases are indicated by “+”, statistically significant decreases by “-” and no statistically significant change by “n.s.”

In addition to each individual CHIP MCO’s rate, the CHIP average for 2018 (MY 2017) is presented. The CHIP average is a weighted average, which is an average that takes into account the proportional relevance of each CHIP MCO. Each table also presents the significance of difference between the plan’s measurement year rate and the CHIP average for the same year. For comparison of 2018 rates to CHIP rates, the “+” symbol denotes that the plan rate exceeds the CHIP rate; the “-” symbol denotes that the CHIP rate exceeds the plan rate and “n.s.” denotes no statistically significant difference between the two rates. Rates for the HEDIS® measures were compared to corresponding Medicaid percentiles; comparison results are provided in the tables. The 90th percentile is the benchmark for the HEDIS® measures.

Note that the large denominator sizes for many of the analyses led to increased statistical power, and thus contributed to detecting statistical differences that are not clinically meaningful. For example, even a 1-percentage point difference between two rates was statistically significant in many cases, although not meaningful. Hence, results corresponding to each table highlight only differences that are both statistically significant, and display at least a 3-percentage point difference in observed rates. It should also be mentioned that when the denominator sizes are small, even relatively large differences in rates may not yield statistical significance due to reduced power; if statistical significance is not achieved, results will not be highlighted in the report. Differences are also not discussed if the denominator was less than 30 for a particular rate, in which case, “NA” (Not Applicable) appears in the corresponding cells. However, “NA” (Not Available) also appears in the cells under the HEDIS® 2018 percentile column for PA-specific measures that do not have HEDIS® percentiles to compare.

The tables below show rates up to one decimal place. Calculations to determine differences between rates are based upon unrounded rates. Due to rounding, differences in rates that are reported in the narrative may differ slightly from the difference between the rates as presented in the table.

Graphical representation of findings is provided for a subset of measures with sufficient data to provide informative illustration to the tables provided below. These can be found in Appendix B.

Access to/Availability of Care

No strengths are identified for 2018 (MY 2017) Access/Availability of Care performance measures.

No opportunities for improvement are identified for 2018 (MY 2017) Access/Availability of Care performance measures.

Table 3.2: Access to Care

Indicator		2018 (MY 2017)					2018 (MY 2017)				
Source	Name	Denom	Num	Rate	Lower 95% Confidence Limit	Upper 95% Confidence Limit	2017 (MY2016) Rate	2018 Rate Compared to 2017	CHIP	2018 Rate Compared to CHIP	HEDIS 2018 National Percentile
HEDIS	Children and Adolescents' Access To PCP (12-24 Months)	41	40	97.56%	91.62%	103.50%	96.77%	n.s.	98.24%	n.s.	>= 75th Percentile and < 90th Percentile

Well-Care Visits and Immunizations

No strengths are identified for 2018 (MY 2017) Well-Care Visits and Immunizations performance measures.

Opportunities for improvement are identified for the following measures:

- The following rates are statistically significantly below/worse than the 2018 CHIP weighted average by ≥ 3 percentage points:
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - BMI percentile (3-11 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - BMI percentile (12-17 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - BMI percentile (Total)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Nutrition (3-11 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Nutrition (12-17 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Nutrition (Total)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Physical Activity (3-11 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Physical Activity (12-17 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Physical Activity (Total)
 - Childhood Immunization Status - Hepatitis A
 - Immunizations for Adolescents – HPV
 - Immunizations for Adolescents - Combination 2

Table 3.3: Well-Care Visits and Immunizations

Indicator		2018 (MY 2017)					2018 (MY 2017)

EPSDT/Bright Futures: Screenings and Follow-up

Strengths are identified for the following 2018 (MY 2017) EPSDT/Bright Futures: Screenings and Follow-up performance measures.

- The following rates are statistically significantly above/better than the 2018 CHIP weighted average by ≥ 3 percentage points:
 - Contraceptive Care for All Women (Age 15 – 20 years): Most or Moderately Effective

Opportunities for improvement are identified for the following measures:

- The following rates are statistically significantly below/worse than the 2018 CHIP weighted average by ≥ 3 percentage points:
 - Lead Screening in Children
 - Developmental Screening in the First Three Years of Life – 3 years
 - Developmental Screening in the First Three Years of Life – Total

Table 3.4: EPSDT/Bright Futures: Screenings and Follow-up

Indicator		2018 (MY 2017)					2018 (MY 2017)

Dental Care for Children

Strengths are identified for the following 2018 (MY 2017) Dental Care for Children performance measures.

- The following rates are statistically significantly above/better than the 2018 CHIP weighted average by ≥ 3 percentage points:
 - Annual Dental Visit (7-10 Yrs)
 - Annual Dental Visit (11-14 Yrs)
 - Annual Dental Visit (15-18 Yrs)
 - Annual Dental Visit (Total)

No opportunities for improvement are identified for 2018 (MY 2017) Dental Care for Children performance measures.

Table 3.5: Dental Care for Children

Indicator		2018 (MY 2017)					2018 (MY 2017)

--------	---------------------------------------------------------------------------------------------	-----	-----	--------	--------	--------	--------	---	--------	------	----

Note: The ADV 19-20 year old age cohort is reported here as only 19 year olds, in order to include only members that are CHIP eligible.

Respiratory Conditions

No strengths are identified for the 2018 (MY 2017) Respiratory performance measures.

Opportunities for improvement are identified for the following 2018 (MY 2017) Respiratory performance measures.

- The following rates are statistically significantly below/worse than the 2018 CHIP weighted average by ≥ 3 percentage points:
 - Appropriate Testing for Children With Pharyngitis
 - Appropriate Treatment for Children With Upper Respiratory Infection

Table 3.6: Respiratory Conditions

Indicator		2018 (MY 2017)						2018 (MY 2017)			HEDIS 2018 National Percentile

HEDIS	Medication Management for People With Asthma - Medication Compliance 75% (Total)	58	22	37.93%	24.58%	51.28%	44.07%	n.s.	35.15%	n.s.	\geq 50th Percentile and $<$ 75th Percentile
PA EQR	Annual Number of Asthma Patients with One or More Asthma-Related Emergency Room Visits (Age 2 – 19 years)	393	26	6.62%	4.03%	9.20%	3.72%	n.s.	7.71%	n.s.	NA

¹ Per NCQA, a higher rate indicates appropriate treatment of children with URI (i.e., the proportion for whom antibiotics were not prescribed).

Note: Although reporting for age cohort 19 - 50 year olds for the MMA measure, it is not included in CHIP reporting as most members in this cohort are not eligible for CHIP based on age.

Behavioral Health

No strengths are identified for 2018 (MY 2017) Behavioral Health performance measures.

No opportunities for improvement are identified for 2018 (MY 2017) Behavioral Health performance measures.

Utilization

No strengths are identified for the 2018 (MY 2017) Utilization performance measures.

Opportunities for improvement are identified for the following measures:

- The following rates are statistically significantly below/worse than the 2018 CHIP weighted average by ≥ 3 percentage points:
 - Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life
 - Adolescent Well-Care Visits

Table 3.8: Utilization

Consumer Assessment of Healthcare Providers and Systems (CAHPS®) Survey

Satisfaction with the Experience of Care

The following tables provide the survey results of four composite questions by two specific categories for the CHIP MCO across the last three measurement years, as available. The composite questions will target the CHIP MCO's performance strengths as well as opportunities for improvement.

Due to differences in the CAHPS® submissions from year to year, direct comparisons of results are not always available. Questions that are not included in the most recent survey version are not presented in the tables.

2018 Child CAHPS® 5.0H Survey Results

Table 3.9: CAHPS® 2018 Child Survey Results

CAHPS Items	2018 (MY 2017)	2018 Rate Compared to 2017	2017 (MY 2016)	2017 Rate Compared to 2016	2016 (MY 2015)	2018 CHIP Weighted Average
Satisfaction with Child's Care						
Satisfaction with your child's current personal doctor (rating of 8 to 10)	90.59%	▼	90.59%	▼	91.02%	89.78%
Satisfaction with specialist (rating of 8 to 10)	85.71%	▼	85.71%	▲	82.26%	86.52%
Satisfaction with health plan (rating of 8 to 10) (satisfaction with child's plan)	86.52%	▼	86.52%	▼	89.26%	86.49%
Satisfaction with child's health care (rating of 8 to 10)	86.68%	▼	86.68%	▼	89.70%	87.45%
Quality of Mental Health Care						
Received care for child's mental health from any provider? (usually or always)	5.96%	▼	5.96%	▼	7.13%	8.37%
Easy to get needed mental health care? (usually or always)	42.31%	▼	42.31%	▲	34.57%	26.76%
Provider you would contact for mental health services? (PCP)	75.05%	▼	75.05%	▼	80.28%	69.73%
Child's overall mental or emotional health? (very good or excellent)	84.34%	▼	84.34%	▼	87.48%	83.79%

▲ ▼ = Performance compared to prior years' rate

Shaded boxes reflect rates above the 2018 CHIP Weighted Average.

IV. 2018 Strengths and Opportunities for Improvement

The review of CHIP MCO's 2018 performance against structure and operations standards, performance improvement projects and performance measures identified strengths and opportunities for improvement in the quality outcomes, timeliness of, and access to services for Medicaid members served by this CHIP MCO.

Strengths

- The CHIP MCO's performance was statistically significantly above/better than the CHIP weighted average in 2018 (MY 2017) on the following measures:
 - Contraceptive Care for All Women (Age 15 – 20 years): Most or Moderately Effective
 - Annual Dental Visit (7-10 Yrs)
 - Annual Dental Visit (11-14 Yrs)
 - Annual Dental Visit (15-18 Yrs)
 - Annual Dental Visit (Total)

Opportunities for Improvement

- The CHIP MCO's performance was statistically significantly below/worse than the CHIP rate in 2018 (MY 2017) as indicated by the following measures:
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - BMI percentile (3-11 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - BMI percentile (12-17 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - BMI percentile (Total)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Nutrition (3-11 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Nutrition (12-17 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Nutrition (Total)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Physical Activity (3-11 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Physical Activity (12-17 years)
 - Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents - Counseling for Physical Activity (Total)
 - Childhood Immunization Status - Hepatitis A
 - Immunizations for Adolescents – HPV
 - Immunizations for Adolescents - Combination 2
 - Lead Screening in Children
 - Developmental Screening in the First Three Years of Life – 3 years
 - Developmental Screening in the First Three Years of Life – Total
 - Appropriate Testing for Children With Pharyngitis
 - Appropriate Treatment for Children With Upper Respiratory Infection
 - Well-Child Visits in the 3rd, 4th, 5th, and 6th Years of Life
 - Adolescent Well-Care Visits

V. Summary of Activities

Structure and Operations Standards

- NEPA was found to be partially compliant on two categories in Subpart C, one category in Subpart D, and one category in Subpart H. Items from Review Year (RY) 2017, 2016, and 2015, as applicable, provided the information necessary for this assessment.

Performance Improvement Projects

- NEPA's Lead Screening and Developmental Screening PIP Baseline Update were both validated. The CHIP MCO received feedback and subsequent information related to these activities from IPRO and CHIP.

Performance Measures

- NEPA reported all HEDIS®, PA Performance Measures, and CAHPS® Survey performance measures in 2018 for which the CHIP MCO had a sufficient denominator.

2018 Strengths and Opportunities for Improvement

- Both strengths and opportunities for improvement have been noted for NEPA in 2018. A response will be required by the CHIP MCO for the noted opportunities for improvement in 2019.

Appendix A

Table 4.1: Ambulatory Care

Indicator	2018 (MY 2017) Rate	2017 (MY2016) Rate	2018 Rate Compared to 2017
